

# WIPER CONTROL SYSTEM

## Report:

In the implementation of the wiper control system, we use 4 LEDs, 1 switch, 1 timer. When we start the car and increase the speed, it changes from one to another.

The speed of the LED will be the speed of the wiper system.

- We can operate the wiper system just by clicking the button.
- When we click long press the same button it will increase its speed.
- Again when we press it will change and then for the next time when we press the same button it will be turned off.
- Here in the implementation, there will be three colors of LEDs. They are green, blue and red.
- When we start the implementation, the green led will glow then blue and red.
- This process continues until we stop the implementation.
- All the leds should come to the earlier position and the stop.
